PROFESSIONAL SUMMARY

Software Analysis and Development Technologist with experience designing, building and deploying business systems to production, from relational database architecture to deployments on Linux servers with Docker. Also brings hands-on experience in technical support, maintenance and upgrading of computer equipment.

At Operación Sistémica S.A.S., served as technical lead in building a modular ERP from scratch with Laravel and Filament and developed most of its modules, which digitized logistics, warranty and human resources processes, and integrated the Odoo inventory with the company's sales channels (Mercado Libre, WooCommerce); also reviewed the team's code and owned production releases. Currently building Café del Tiempo, an open-source suite running in production with zero-knowledge encryption, Docker deployment and automated backups.

Works autonomously, understands business processes and turns them into functional, maintainable solutions built on modular architectures, role-based access control, automated testing and code review. Looking to contribute in software development, technology, infrastructure or technical support roles that offer room to make an impact and keep growing.

PROFESSIONAL EXPERIENCE

- Software Developer

Operación Sistémica S.A.S. · Systems Department

Jan 2026 – Jul 2026

 - Architected and built ERP OS from scratch, a modular business platform to digitize the company's entire operation.
 - Technical leadership and team management: code validation and approval, and task distribution for new developers joining the project.
 - Managed production releases, infrastructure configuration and system deployment.
 - Developed business-critical modules for logistics, warranties and human resources, plus an abstraction layer to integrate different AI model providers into the system.
 - Integrated Odoo, Mercado Libre and WooCommerce to cross-reference Odoo inventory with each sales channel's listings and manage product photos and data.
- Technical Assistant in Systems, Programming and Technology

Alcaldía Municipal de El Espino (Municipal Government)

Mar–Apr 2024
Jan–Feb 2025

 - Technical support for cleaning, upgrading and tuning up the municipal administration's computers.
 - Handled needs related to systems, programming and technology.
 - Worked autonomously and independently in accordance with the contract scope.

EDUCATION

Technologist in Software Analysis and Development

SENA (National Learning Service, Colombia)

Centro Agroempresarial y Turístico de los Andes · Málaga

TECHNICAL SKILLS

Software & Systems

PHP · Laravel · Filament · MySQL · PostgreSQL · REST APIs · Modular Architecture · Deployment management · Git · Bitbucket · Docker · Linux

Technology & Support

Computer diagnostics and upgrades · technical support · operating systems · environment setup

Hardware / Automation

Arduino · basic electronics · motion control · hardware/software integration

Workshop

Power and pneumatic tools · woodworking machinery · familiarity with hands-on fabrication processes

AREAS OF INTEREST

- Process digitalization
- Enterprise software
- Industrial software
- Automation
- Manufacturing
- CNC machining
- Machinery
- Maintenance

LANGUAGES

Spanish · Native
English · Currently learning

Career Objective

To join an organization where I can apply my knowledge of software development, technology and process digitalization to solve technical and operational needs, while continuing to strengthen my skills and taking on new challenges in technology, automation, infrastructure and technical support.

FEATURED PROJECTS

ERP OS — Modular Enterprise Platform

2026

End-to-end development · Operación Sistémica

Architected and built from scratch a modular ERP system, personally developing most of its modules, to automate operational, logistics, commercial and human resources processes, integrated with Odoo, Mercado Libre and WooCommerce. Implemented strict role-based access control and unified administrative panels. Led the technical team and owned production deployments.

- Laravel 12 / Filament
- Modular Architecture
- Technical Leadership
- Process Digitalization

Café del Tiempo — Open-Source Personal Suite

In Production

Personal project · Open source (MIT)

Open-source modular platform running in production at cafe.tequia.dev, with a zero-knowledge digital vault (client-side encryption with Argon2id and AES-256-GCM) and a personal finance module with dashboards and Excel/PDF reports. Multi-user with per-user data isolation, self-hostable with Docker and deployed on a self-managed server with PostgreSQL and automated backups.

cafe.tequia.dev · github.com/xenthrall/cafe-del-tiempo

- Laravel 13 / Filament 5
- Zero-knowledge encryption
- Modular Architecture
- Docker / PostgreSQL
- Tailwind CSS

Experimental Mini CNC

Honorable Mention

School Technology Fair · 2023 · 11th Grade

Designed and built an experimental mini CNC machine using components salvaged from computer equipment. Programmed with Arduino, integrating hardware and software to control the machine's motion. The system could vectorize images and use the resulting data to draw on paper.

- Arduino
- Hardware
- Motion control
- Hardware/software integration

HANDS-ON WORKSHOP EXPERIENCE

Family carpentry workshop during adolescence. Took part in hands-on fabrication and repair work, gaining familiarity with workshop machinery and tools, including saws, planers, sanders, polishers, drills, band saw, paint compressor, pneumatic tools and pneumatic nail gun.
